SHYAM PATEL

661 Vendella Circle, McDonough, GA 30253 | (609) 721-4234 | spatel3309@gatech.edu | U.S. Citizen

OBJECTIVE

Electrical Engineering student seeking a Summer 2027 internship in circuit technology, signal processing, embedded systems, or semiconductor-related engineering. Offers a strong quantitative foundation, hands-on design experience, leadership, and growing experience in digital systems and Python.

EDUCATION

Georgia Institute of Technology | Atlanta, GA *Expected May 2028*
Bachelor of Science in Electrical Engineering | GPA: 3.60

SKILLS / CERTIFICATIONS

Autodesk Certified User: Revit Architecture *2025*
- Validated skills across 4 areas: Revit-based modeling, floor plans, elevations, and technical design documentation.

Construction Ready Tape Measure Credential *2024*
- Validated accurate measurement and dimensioning for construction and design work.

Technical: Python; Boolean algebra; truth tables; minterms/maxterms; SOP/POS; logic-gate analysis
CAD / Design: Autodesk Revit, AutoCAD, Autodesk Inventor, Homestyler
Drafting: Single-view and multiview drawings; dimensioning; architectural layouts
Languages: English (native), Gujarati (intermediate)

EXPERIENCE

Baymont by Wyndham | McDonough, GA *Apr 2026 - Present*
Front Desk
- Support 3 core front-desk functions - check-ins, reservations, and payments - while maintaining accurate records and a professional environment.
- Resolve guest issues and coordinate requests in a customer-facing setting that requires communication, organization, and attention to detail.

PROJECTS

Agile Locomotion & Manipulation | Georgia Tech VIP *Fall 2026 - Present*
Vertically Integrated Projects (VIP) Program
- Selected for a multidisciplinary robotics project team focused on 2 areas: agile locomotion and manipulation; building experience with collaborative engineering design and research workflows.

Architecture & Engineering Design Portfolio *Aug 2022 - May 2026*
- Completed a 4-year design portfolio, including an American Institute of Architects (AIA) project, using the engineering design process, drafting standards, and presentation methods.
- Designed a client house around user needs, budget considerations, and site requirements; created 4 deliverable types - floor plans, exterior views, dimensions, and layouts - using Autodesk tools.

RELEVANT COURSEWORK

Digital System Design: Design and implementation of digital systems using CAD tools, logic synthesis, assembly-language programming, and team-based project methodologies.
Differential Equations: Analytical and numerical methods for solving differential equations, with applications in modeling dynamic engineering systems.
